

# Quality of correction ? - 1

$$S = \frac{I_{\text{post AO}}[0, 0]}{I_{\text{perfect}}[0, 0]}$$

where  $I[0,0]$  is the intensity of the PSF at the optical center of the field (K. Strehl, Zeit. Instrumenkde 22, 213 (1902)).

$$S \simeq \exp\{-\sigma_{\text{post AO}}^2\}$$

in the framework of the Maréchal's approximation, where the variance (in radians<sup>2</sup>) is supposed to be small enough...

Approximation qui néglige le tip-tilt : rapport des maxima

rapport des valeurs au centre de l'image  $\approx$  rapport des FTO  
(voir par exemple article de Roberts et al.)

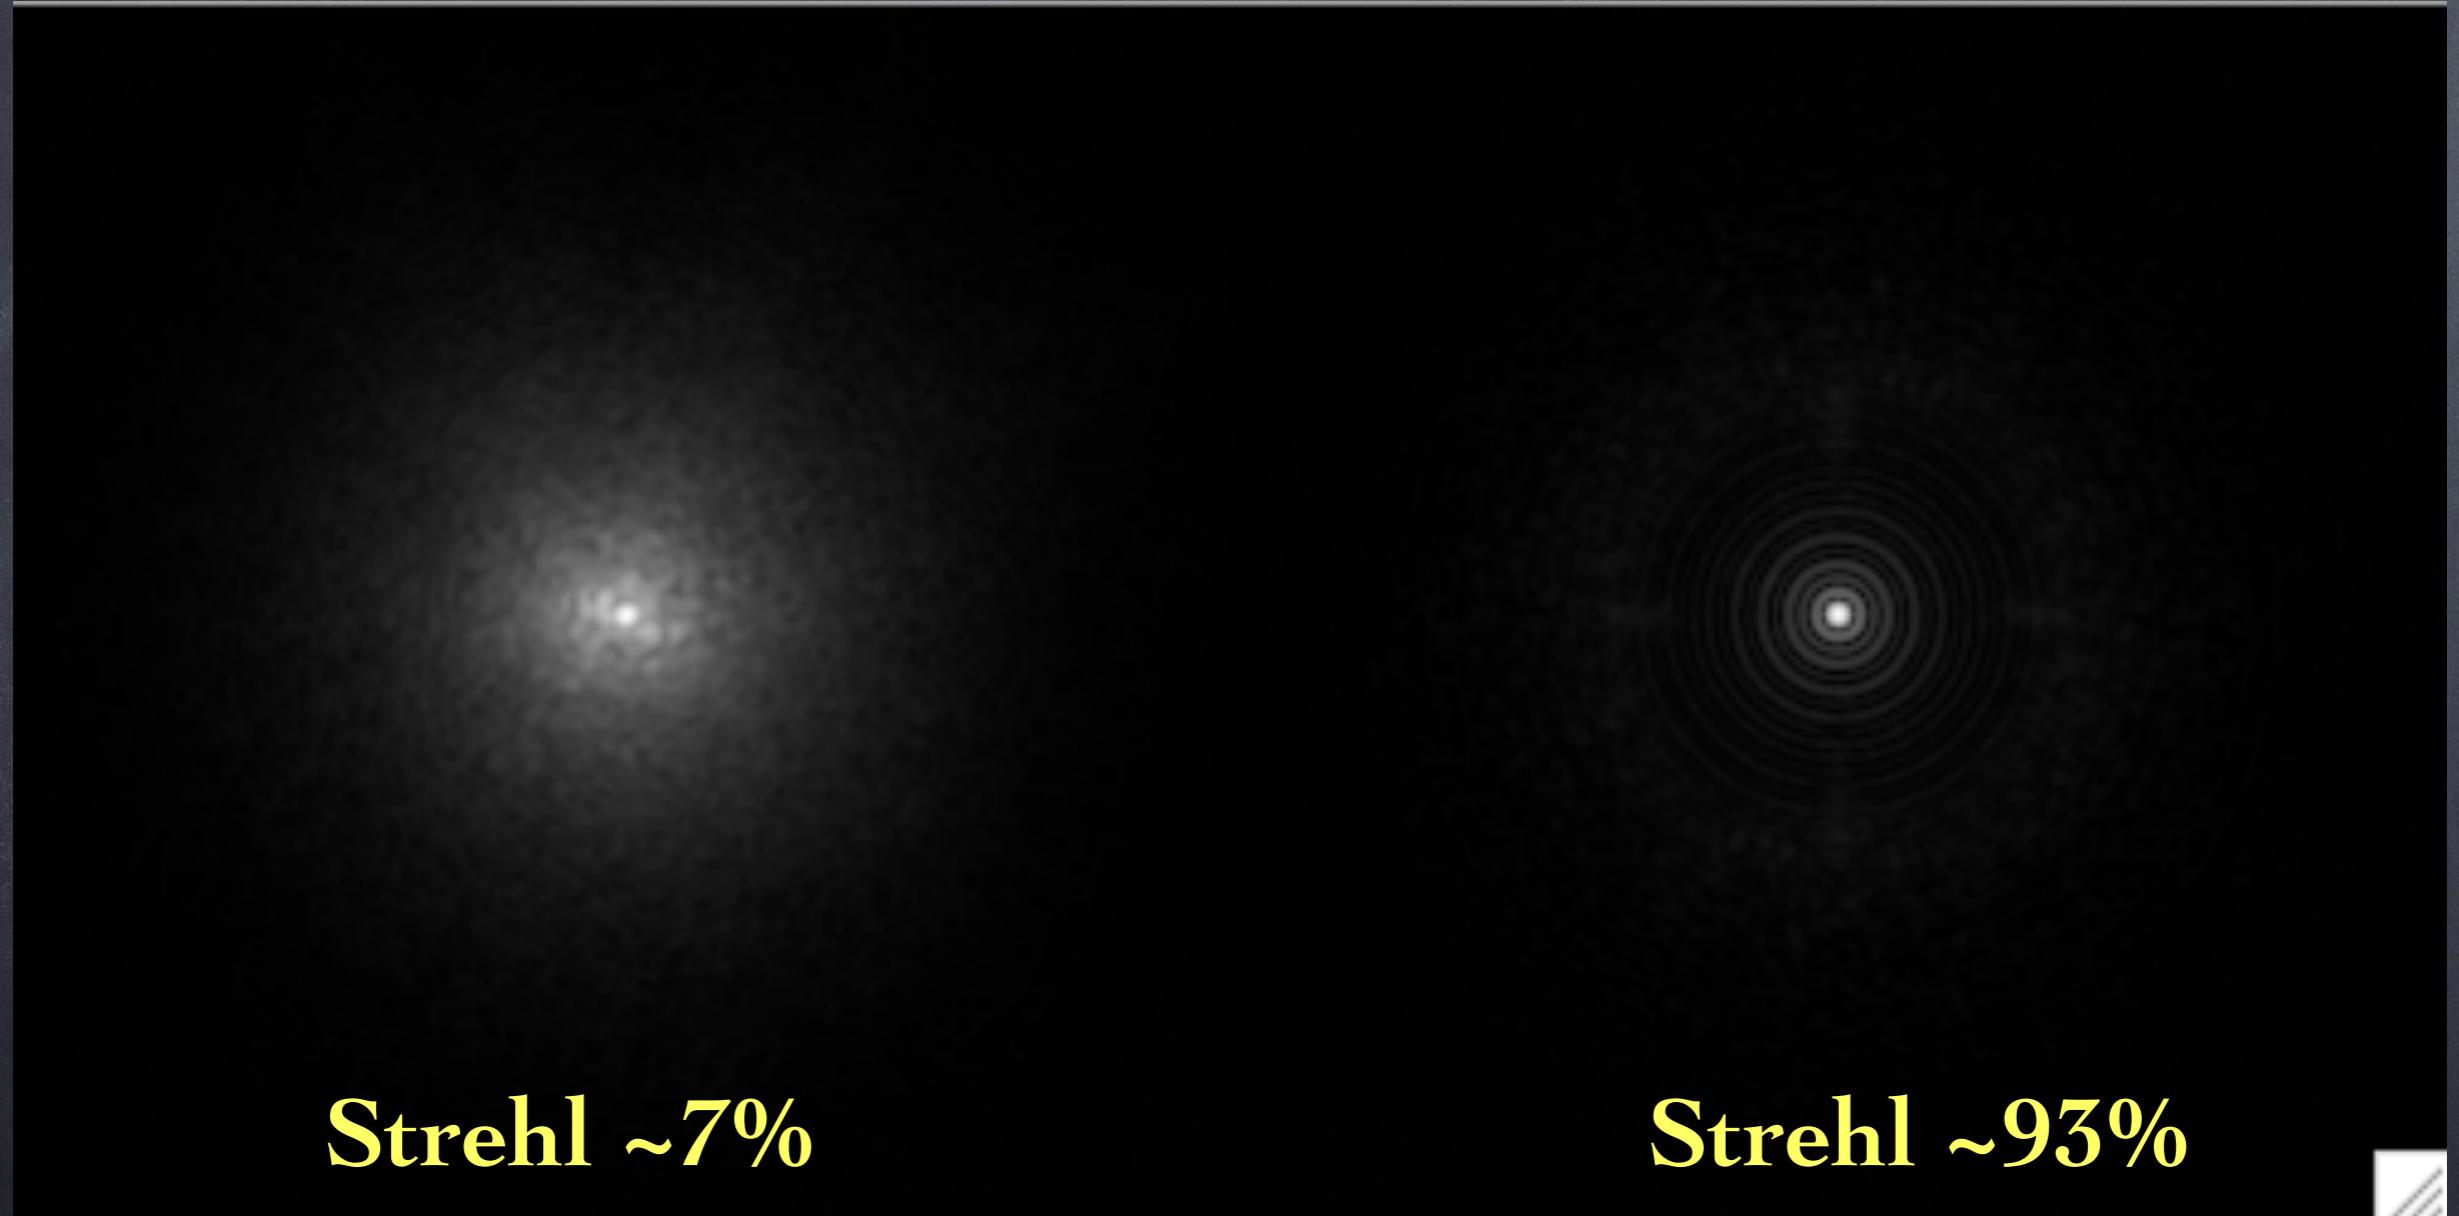

From Tokovinin, PASP (2002):

$$S = \frac{I_{max}}{I_{tot}} \frac{4}{\pi} \left( \frac{\lambda_{CCD}}{D \Delta x} \right)^2$$

GGTau-type object: central binary + circumbinary ring

# Post-AO PSF morphology - 1

**no correction**

**corrected ( $SR = 64\%$ )**

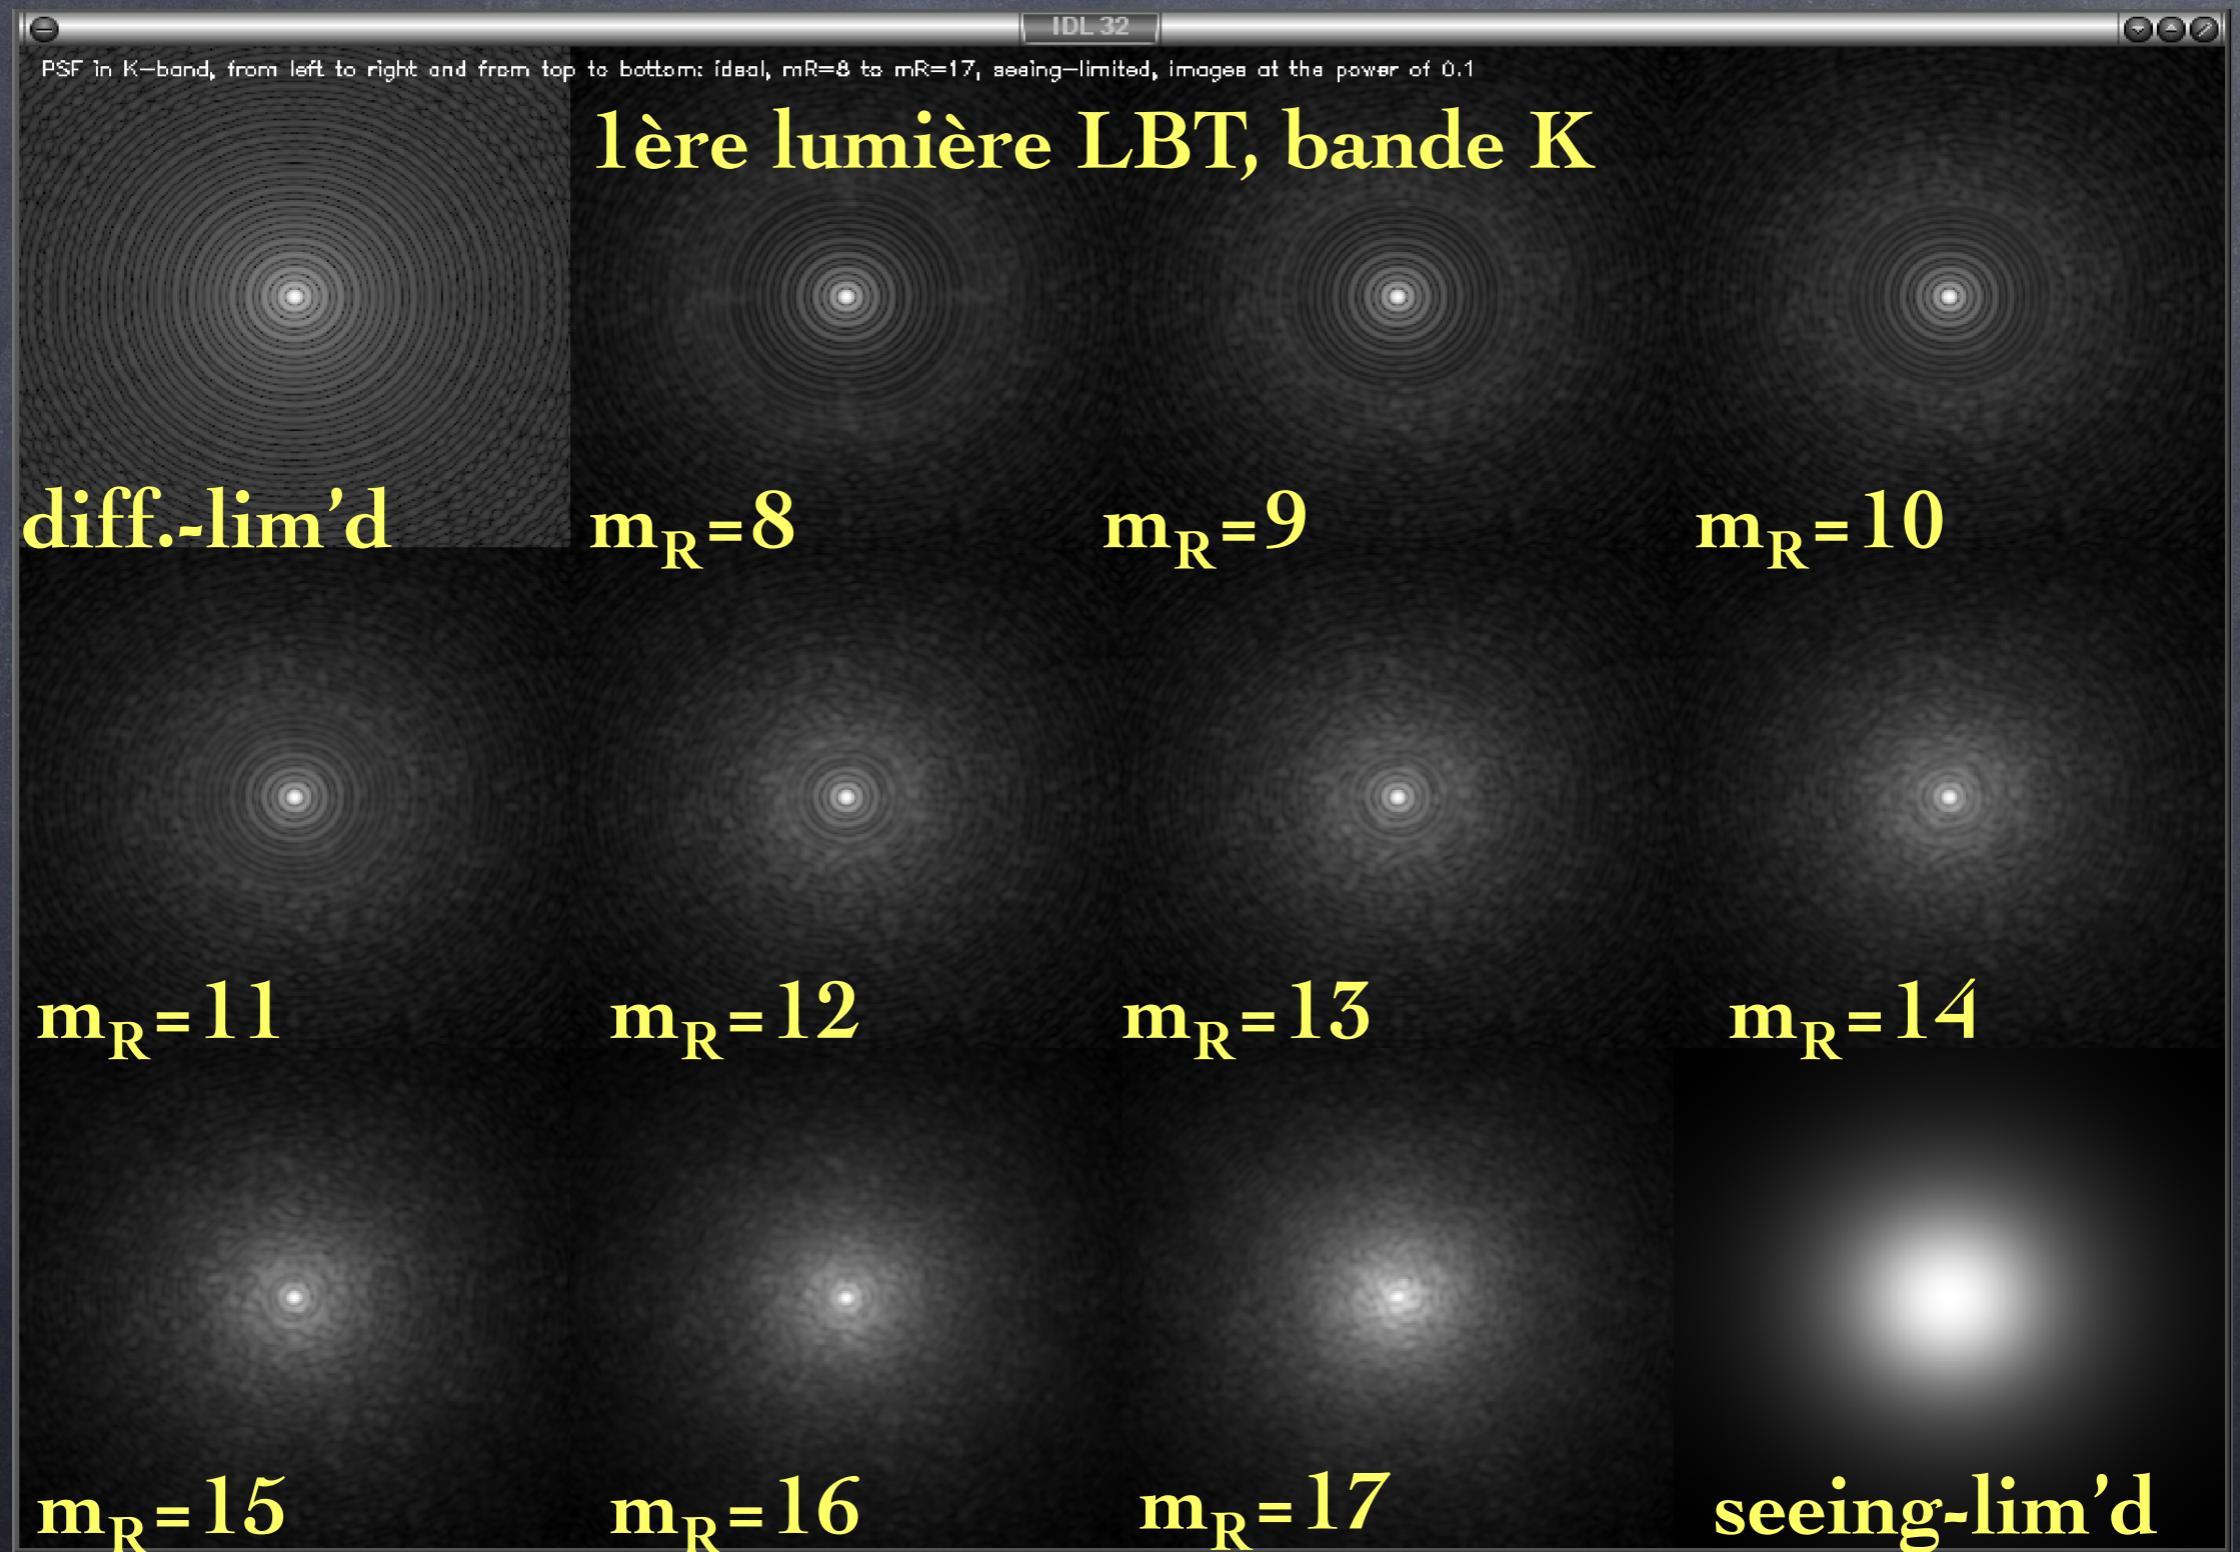

**Imaging wavelength :  $2.2\mu m$**

**Airy pattern**

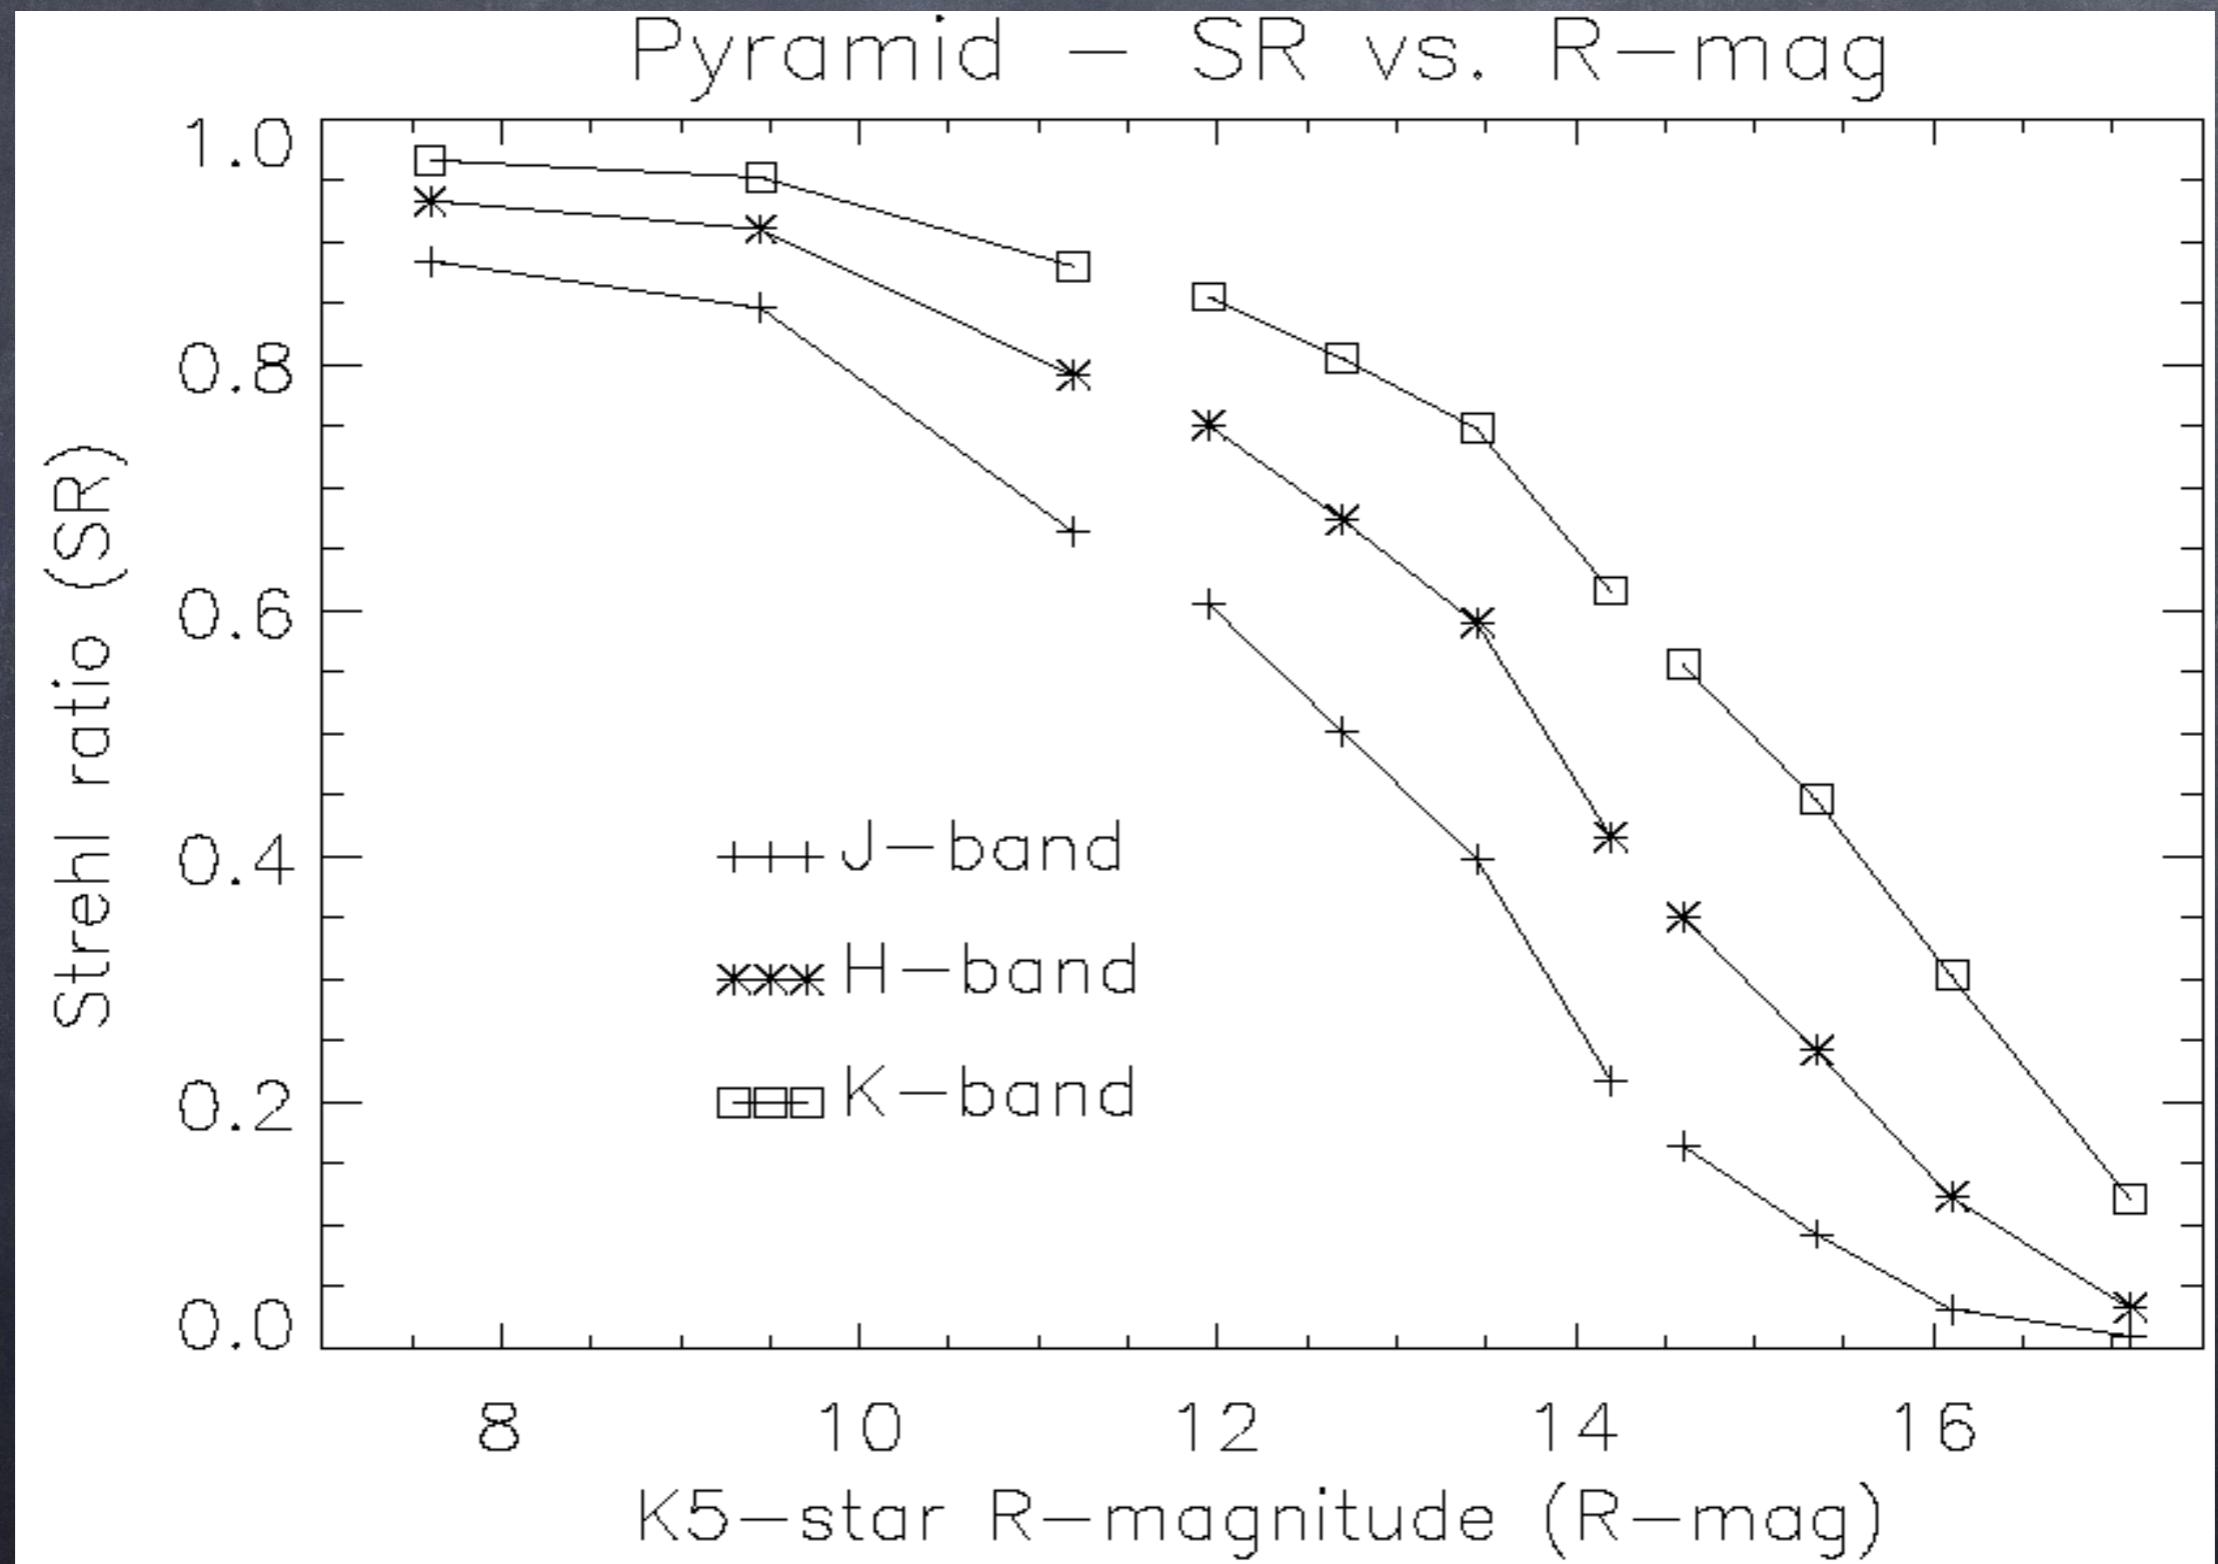

**Turbulence :  $r_o = 1m$  à  $2.2\mu m$ , wind speed =  $10m/s$ , telescope :  $D = 8m$**

**System (NAOS) : 144 sub-aperture, 185 actuators,  $500Hz$  temporal sampling frequency**
